

## Information sheet X-grid mixer

The plastic X-grid mixers are used for mixing adhesives, sealants, lacquers and other viscous materials where a high degree of mixing, a short mixing length and a low volume are required. This mixer is mostly used in mixing systems where two materials with different viscosities need to be mixed.

Due to the alternating, compact mixing element geometry, X-grid mixers are considerably shorter than comparable mixers. As a result, less material remains in the mixer and more material is available for processing.

Number	Quantity Mixing elements	Inner diameter [mm]	Outer diameter [mm]	Length [mm]	Outlet [mm]
GBT09-12	12	9,5	12,5	145,5	3
GBT09-14	12	9,5	12,5	164	3
GBT09-16	16	9,5	12,5	184	3
GBT09-20	20	9,5	12,5	220	3
